1 Problem

2 Solution

3 Construction

1 Problem

If the diagonals of a parallelogram are equal, then show that it is a rectangle.

2 Solution

Theory:

In a parallelogram if diagonals are equal all angles should be the same.

To Prove: Any angle in the parallelogram is 90 degrees

Theorem : In a parallelogram if diagonals are equal and one of its angle is 90 degrees then its a rectangle.

In $\triangle ABC$ and $\triangle DCB$
 $AB = DC$ (Opposite side of a parallelogram)
 $BC = BC$ (Common)
 $AC = DB$ (Given)
 $\therefore \triangle ABC = \triangle DCB$ (SSS congruence rule)
 $\angle ABC = \angle DCB$ (CPCT)

To Prove: Any angle in the parallelogram is 90 Degrees.

We know that $AB \parallel DC$

BC is a Transversal

$\angle B + \angle C = 180$
 $\angle B + \angle B = 180$
 $2\angle B = 180$
 $\angle B = 90$
Hence, Proved

1 termux commands :

1 `python3 matrix.py`

2 The input parameters for this construction are

Symbol	Value	Description
r	6	AC
k	4	AB
θ	$\arccos(k/r)$	$\angle AC$
A	$\begin{pmatrix} 0 \\ 0 \end{pmatrix}$	Point A

To Prove: $\angle C = 90$

AC = BD by \triangle law of vector addition,

$$AC = AD + DC$$

$$AD - CD$$

$$BC - CD$$

$$BD = BC + CD$$

$$\text{Now, } BD = AC$$

$$\text{Or, } BD^2 = AC^2$$

$$(BD)^2 = AC^2$$

$$(BC+CD)^2 = (BC-CD)^2$$

$$(CD-CB)^2 = (CD+CB)^2$$

$$(CD)^2 - 2CD.CB + (CB)^2 = (CD)^2 + 2CD.CB + (CB)^2$$

$$4CD.CB = 0$$

$$CD \perp CB$$

$$\angle C = 90$$
